DETAILED ACTION

Response to Amendment

1. Applicant's response filed November 3rd 2008 has been entered and made of record.
2. Applicant has amended claims 1-8. Claims 1-8 are pending.
3. Applicant's remarks in view of the newly presented claim amendments have been fully considered and found to be persuasive. The claims are found to be in condition for allowance and reasons for allowance are given below. An Examiner's amendment is also included below.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Eric Krischke, Reg. No. 42,769 on November 21, 2008.

Claims 1-3, should be amended as follows:

1. An image processing method comprising using a processor configured to:
adapt a reference image and a plurality of images for a granulometric analysis;

obtain a pattern spectrum of the reference image from the granulometric analysis;

check for a similarity between the pattern spectrum and each of the plurality of images;

extract a plurality of candidate images that are similar to the reference image from the plurality of images based on the granulometric analysis;

transform the extracted plurality of candidate images on the basis of the reference image;

calculate mutual information shared by each of the plurality of transformed candidate images and the reference image; and

select a candidate image, which shares a largest amount of mutual information with the reference image, from among the plurality of transformed candidate images.

2. The image processing method according to claim 1, wherein said transform the extracted plurality of candidate images on the basis of the reference image includes matching of magnifications by matching a size of each of the extracted plurality of candidate images with a size of the reference image.

3. The image processing method according to claim 1, wherein said transform the extracted plurality of candidate images on the basis of the reference image includes alignment of barycenters by aligning a barycenter of each of the extracted plurality of candidate images with a barycenter of the reference image

Applicant faxed these claim amendments on November 21, 2008 in response to Examiner Amendment request for the claims in order to overcome a method or process claim not tied to another statutory category.

Allowable Subject Matter

4. Claims 1-8 are allowed.

The following is an examiner's statement of reasons for allowance:

Applicant's remarks in view of the newly presented claim amendments have been fully considered and are found persuasive.

The cited combination of references to Wyman and Ayala do not teach or fairly suggest the claimed features of:

"adapting a reference image and a plurality of images for granulometric analysis;

obtaining a pattern spectrum of the reference image from the granulometric analysis; and

checking for a similarity between the pattern spectrum and each of the plurality of images;” in addition to the other claimed features.

Wyman discloses the image that matches the most data is selected at step 450, col. 10 lines 8-13. See also column 4, lines 44-46. Wyman discloses that mutual information is used to determine closeness of fit; the closeness of fit being the best when the largest amount of mutual information is shared between the images. Ayala is cited to teach the use of granulometry. Ayala discloses using granulometry on page 1430 2nd column, lines 6-11 and under section 3 starting on page 1431. However, neither Wyman nor Ayala nor any other found prior art of record teaches of fairly suggests specifically adapting a reference image and a plurality of images for granulometric analysis, obtaining a pattern spectrum of the reference image from the granulometric analysis and checking for a similarity between the pattern spectrum and each of the plurality of images in addition to the rest of the claimed features.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to WESLEY TUCKER whose telephone number is (571)272-7427. The examiner can normally be reached on 9AM-5PM.
